[**Digital Innovation Program Academy - Become a Low-Code Engineer**]

Excellent learning environment with great opportunities!

Come work as a **Junior Low-Code Engineer** in a growing IT company that offers great benefits with opportunities to advance and learn along with the Digital Transformation.
For our partner Eidos we are looking for talented individuals to train on **Microsoft Power Platform and Microsoft Fabric**, a short academy that will allow you to be hired directly.

- Academy **Start** Date: **06/05/2024**
- Duration and modalities: **1 month**, full time, **full remote**
- **Paid Training with initial fixed term contract**

This opportunity is for you if you think you have the following soft skills:

- Passion for technology
- Consultative approach and strong relationship-building skills
- Problem solving skills
- Good interpersonal skills
- High propensity to grow and achieve certifications
- Ability to articulate complex topics and present them to stakeholders in clear and concise way
- Detail-oriented and result-focused

Nice to have:

- Degree in Computer Science / Information Technology / Software Engineering / Telematics / Mathematics
- Experience in business analysis and process reengineering, managing and creating business process documentation and process flow diagrams
- Working with software design principles and modular programming techniques with hands-on experience in one or more programming languages

Proficiency in English is required as the Academy will be exclusively in English.
Topics covered:

- o Digital Transformation
- o Microsoft Power Platform Overview
- o Power Apps: create an app in a day!
- o Relational database: entities and SQL language
- o Dataverse
- o Power Apps in deep: canvas and model-driven
- o APIs
- o Automations: Power Automate
- o Microsoft Fabric Overview
- o Power BI
